A REVOLUTIONARY IDEA:
As a college student working part-time at a tool rental company, Greg Barreto was frustrated by the amount of time he spent fixing the tillers that were constantly breaking down. He knew there had to be a way to make a better tiller. One that could withstand the abuse of the industry.

Greg knew the tiller parts most often needing repair were the belts, chains, and gears. If he could eliminate these high maintenance mechanical components, the tiller would be more reliable by design and more efficient for the owner and operator. He experimented with hydraulic power and found he could make a rental duty tiller - without belts, chains, or gears.

In 1982, Greg designed and built the industry’s first all-hydraulic tiller. He sold that first tiller to his employer at the rental yard, who rented it for over 20 years. Greg and his wife, Chris, founded Barreto Manufacturing, Inc. in January of 1984. Customers, eager to save the cost and hassle of frequent repairs, gave the new tiller a try and came back with glowing reviews. Word of the revolutionary new all-hydraulic tiller spread and Barreto Manufacturing grew. In 1986, Greg and Chris moved their family to La Grande, Oregon, and set up manufacturing operations for all-hydraulic tillers.

LEADING THE INDUSTRY:
Customers were so impressed with the performance and reliability of the Barreto tiller, Greg began looking for innovative ways to grow the product line and meet customer needs. This desire for innovation paved the way for Barreto Manufacturing to be an industry leader with a long line of firsts in the hydraulic equipment available on the market today:

- The first all-hydraulic walk behind tiller in 1982
- The first all-hydraulic walk behind trencher in 1995
- The first all-hydraulic self-propelled mini walk behind trencher in 2005
- The first all-hydraulic steerable walk behind trencher in 2007
- The first all-hydraulic automatic-drive micro trencher in 2010

Providing a solution for every market, Barreto equipment is truly an industry exception. In addition to tillers and trenchers, Barreto Manufacturing also offers log splitters, stump grinders, wood chippers, and a range of trailers and accessories. Barreto manufactures over 80% of their components in-house to ensure quality and keep parts in stock for customers. No hassling with lead times or backorders. All equipment offered by Barreto Manufacturing is powdercoated in-house in their state of the art facility.

YOUR ROI:
Now a multi-million dollar company, Barreto Manufacturing’s operations are still headed by Greg Barreto. Greg believes innovation in design and quality in manufacturing are key to helping his customers enjoy the greatest return on investment. Each piece of Barreto equipment is designed to excel in the most difficult conditions, without the downtime often experienced in harsh rental and industrial environments. Backed by the philosophy that in order for a company to be successful, its customers must be successful, Barreto strives to provide the best quality and service possible.

Call 1-800-525-7348 or visit us on the web at www.barretomfg.com for more information.
“At Barreto Manufacturing, honesty and integrity are qualities we strive for. Our goal is to build loyalty and confidence by building the highest quality product, backing it with exceptional service, selling it at a fair price, and being above reproach in how we deal with our customers, our vendors, and our employees. We believe whole heartedly in Proverbs 22:1: ‘A good name is to be desired more than great riches.’

We know that a good name doesn’t just happen. It is earned. It starts with treating others as we would like to be treated and continues with going the extra mile. But, because we are human, we humbly admit that we are less than perfect. We do purpose, however, to correct our mistakes. We desire to bring honor not to ourselves, but to our Lord and Savior, Jesus Christ, who freely gives eternal life in heaven to those who put their faith and trust in Him.”

### Engine Options*:

- **Honda (HP: 5.5)**
- **GX200**
- **Fuel**
- **Gasoline**

### Additional Specs:

- **Hydraulic Reservoir**: 1.5 gallons / 5.68 liters
- **Ground Drive Forward**: 148 ft/min / 45.11 m/min
- **Ground Drive Reverse**: 23 ft/min / 7.01 m/min
- **Digging Chain Speed**: 200 ft/min / 60.96 m/min

* GX200 specs per [http://engines.honda.com/models/model-detail/gx200](http://engines.honda.com/models/model-detail/gx200)
**DESIGN**

The 712MT micro trencher features a unique automatic wheel drive propulsion system. This trencher utilizes a load-sensing hydraulic valve to adjust the trenching wheel speed to the load on the digging chain. When the load on the digging chain increases, the sensing valve sends less oil to the wheel drive motor and the wheel speed will automatically slow down. When the load on the digging chain decreases, the sensing valve sends more oil to the wheel drive motor and the wheel drive speed will automatically increase. This keeps a constant load on the engine, regardless of the depth of cut or differing soil conditions. Not only does this help the trencher run at optimal efficiency, it reduces stress on the components, increasing their longevity.

**CONTROLS**

The automatic adjustment to the wheel speed eliminates the responsibility on the operator to constantly adjust their wheel speed. Nothing could be easier for the novice user. One control lever operates the wheel drive and one lever operates the chain drive. After engaging the chain drive lever, the operator just engages the wheel drive lever and lets the trencher do the work. When the wheel drive is in forward, the chain drive will not activate, eliminating costly repairs sometimes caused by inexperienced operators.

**ROI**

Small trenchers can become one of your leading revenue sources. With a unique design that provides limited need for maintenance and repair, the 712 will keep going out into the field time and again without sitting in the shop waiting for repair.

**FEATURES**

- Simple controls are easy for even the most novice operator
- Hydraulic drive motor provides self-propelled trenching
- Free wheeling hubs allow the operator to transport without the engine running
- Manual lever lowers the boom and locks in one of three positions for trench depth
- Load sensing valve automatically adjusts wheel speed to digging conditions

**CHAIN OPTIONS**

- Cup Chain
- Double Cup Chain
- ComboShark Chain
- Welded Shark Chain
- Bolted Shark Chain

**BOOM OPTIONS**

- 12 or 18" depth
- 3.5 or 4.5" width

**DESIGN**

Sometimes the job demands a more compact approach without sacrificing production speed. To meet the needs of the residential contractor who may be working in tight spaces, this self-propelled trencher can easily handle sprinkler systems, electrical lines, and other shallow trench applications. The 912 saves on space while still providing the horsepower necessary to trench up to 24” deep. The boom pivot design keeps high wear components out of the dirt and is easily maintained. The front end pivots on a pin instead of a boom pivot bushing. This reduces maintenance issues often caused by dirt and debris.

**CONTROLS**

The control panel is simple and understandable for even the novice operator. The safety clutch engages and disengages the wheel and chain drives. When the clutch is released, the engine continues to run and the controls remain in place, ready to resume trenching at any time. Variable speed drive allows the operator to adjust their wheel speed to the soil conditions. The reversible chain drive can be operated manually to dislodge obstructions or debris.

**ROI**

Trenchers can become one of your leading revenue sources. With a unique design that provides limited need for maintenance and repair, the 912 won’t be tying up your revenue or your mechanic. It will stay in the field and get the job done. Because Barreto trenchers are reliable in the most difficult conditions, customer satisfaction is high. When the customer is provided with a piece of equipment that makes their job this easy, they keep coming back.

**FEATURES**

- Reliable hydraulic design keeps efficiency high and maintenance low
- Simple controls are easy to operate with no color codes to remember
- Free wheeling hubs allow the operator to transport without the engine running
- The innovative boom pivot design keeps the bushing out of the dirt
- Reversible chain can be manually operated to dislodge debris

---

*GX390 specs per [http://engines.honda.com/models/model-detail/gx390](http://engines.honda.com/models/model-detail/gx390)
DESIGN

All hydraulic means no belts, gears, or chains. The hydraulic chain drive motor is attached directly to the head shaft. Maintenance is easy and repairs are minimized. A lower center of gravity provides stability. The outboard bearing is designed to protect the auger shaft from the bending that is sometimes caused by the impact of rocks or other debris when trenching.

CONTROLS

The control panel is simple and understandable. The safety clutch engages and disengages the wheel and chain drives. When the clutch is released, the engine continues to run and the controls remain in place, ready for you to resume trenching at any time. Variable speed drive allows the operator to adjust their wheel speed to the soil conditions. The reversible chain drive can be operated manually to dislodge obstructions or debris. The operator can manually unlock the axle with a lever on the control panel for easier turning when transporting.

ROI

Trenchers can become one of your leading revenue sources. With a unique design that provides limited need for maintenance and repair, these trenchers will keep going out into the field time and again without sitting in the shop waiting for repair. Because Barreto trenchers are reliable in the most difficult of trenching conditions, customer satisfaction is high. Your return on investment is increased when you reduce your overhead by limiting maintenance time and repair parts and by providing a piece of equipment that works hard for your customers.

FEATURES

Boom tension can be easily adjusted when needed
Simple controls are easy to operate with no color codes to remember
Quick access to all of the hydraulics for easy maintenance and repair
Multiple grease points are clearly marked and easily maintained
Hydraulic pumps are protected yet accessible

</table>
With its compact size and weight of 1,085 pounds, the STK track trencher has the same key features as our larger track trencher. The innovative new track system and compact frame design provide both stability and maneuverability. A hydraulic cooler with incorporated fan keeps the oil temperatures regulated. Electric start is standard on all models. Efficient and functional, the STK is the perfect addition to any trencher fleet.

**CONTROLS**

The STK features our Adjustable Trenching Controls (ATC) that use rod linkage instead of cables. The ATC can be positioned to modify the trenching speed of the tracks individually while on the go. By utilizing the individual track controls, the operator has the ability to keep their trench straight when working on uneven terrain.

**ROI**

In keeping with the Barreto standard, the STK trencher is low maintenance and reliable in the most difficult conditions. The effortless steering, tracks, and size of this trencher make the operator’s job simple and keeps customer satisfaction high. Components are protected yet easily accessed and maintenance costs are minimal.

**INDEPENDENT FLOATING TRACK SYSTEM**

The floating track system utilizes independent undercarriage idlers that move in response to the terrain. This design keeps a significant portion of the track in contact with the terrain at all times, reducing ground pressure and increasing traction. The movement of the middle and rear idlers act as suspension and smooth the overall movement of the trencher. This provides for a more fluid operation than traditional track trenchers when working in rough and uneven conditions.

2024RTK/2324RTK TRACK TRENCHER

DESIGN

The RTK Stand-on Track Trencher features a fixed platform, and with engine options of 20 or 23hp, it attacks the ground and the job with the power to meet the challenge. Trenching up to 48” deep and 6” wide, this trencher will take on anything that is thrown at it. The RTK trencher features a 7.1” wide track that creates 235 square inches of footprint on each side of the machine. This gives the outstanding traction on wet soil, clay, sand, or steep terrain while softening the impact on any existing landscaping. The track absorbs most of the impact caused by rocks, roots, or other obstructions in the soil. The RTK features a weight advantage that improves traction, reduces impact on the operator, and provides stability. All models feature electric start.

CONTROLS

The RTK features unique fine-tuning control adjustment that uses rod linkage instead of cables. The new Adjustable Trenching Control (ATC) can be positioned to modify the trenching speed of the tracks individually while on the go. By utilizing the individual track controls, the operator has the ability to keep their trench straight when working on uneven terrain.

ROI

Low maintenance and hardworking, the RTK trencher is reliable in the most difficult conditions. The simple steering, large tracks, and size of this trencher make the operator’s job simple and keeps customer satisfaction high. With accessible yet protected components, maintenance costs are minimal.

FEATURES

Simple one-handed controls are easy for any operator
Quick access to all of the hydraulics for easy maintenance and repair
Large track footprint absorbs impact and bucking when trenching
Boom pivot design keeps high maintenance components out of the dirt reducing wear
Greaseable nose roller reduces maintenance issues often associated with trenchers

13SGH/16SGB
MINI STUMP GRINDER

DESIGN
The latest addition to the Barreto Tree Care Family is the new 13SGH/16SGB stump grinder. This stump grinder’s unique design pivots over the center line of the wheels, allowing the grinding head to sweep easily across the stump, while the wheel base remains stationary. Engine options include the Honda GX390 or the 16hp Briggs & Stratton Vanguard V-Twin. The innovative design and compact stature of this stump grinder makes it ideal for tight access areas. The swivel head has a swing arc of 35˚ and the cutting wheel has eight carbide green teeth with three cutting surfaces. Free-wheeling hubs facilitate easy travel to the jobsite, while the independent wheel locks allow for easy locking while grinding.

CONTROLS
The height of the 13SGH/16SGB operator control handlebar can be easily adjusted to suit both the operator and the grinding situation. The cutter wheel is operated by the handlebar-mounted safety bale and a fully throttled engine. The handle bale acts as a secondary safety switch to prevent accidents. The operator uses the handlebars to manually control the head swing and depth of cut.

ROI
With a unique design that provides limited need for maintenance and repair, these stump grinders will remain in the field getting the job done instead of tying up your revenue and mechanic. Because Barreto stump grinders are reliable in difficult conditions, customer satisfaction is high.

FEATURES
To save time, money, and maintenance, the eight carbide green teeth each have three cutting surfaces.
The innovative pivot over center swivel head design allows the grinding wheel to sweep easily across the stump.
Easy to operate controls are located on the adjustable-height handle bar, and the safety lever requires operator presence.

**Engine Options***:
- Briggs Vanguard 31hp V-Twin
- Fuel: Gasoline

**Additional Specs**:
- Hydraulic Reservoir: 14 gallons, 52.99 liters
- Hydraulic Flow to Head: 13.3 gpm, 50.35 lpm
- Head Swing: 134°, 99.7” arc, 134°, 2.5m arc
- Ground Drive Forward: 290 ft/min, 88.4 m/min
- Ground Drive Reverse: 180 ft/min, 55 m/min

DESIGN
An offshoot of the dependable TK track trencher, the 30SG stump grinder features a variant of the same time-tested track drive platform used by the TK series. The 30SG has a hydraulically-driven cutter wheel that is raised and lowered into the stump and then moved from side to side to cut down. The 30SG is powered by a 31hp Briggs & Stratton Vanguard V-Twin engine. The engine is coupled to two gear pumps: the larger gear pump drives the cutter wheel and the smaller pump works the tilt and swing cylinders. The tracks are driven by independent hydrostatic pumps mounted on the rear of the engine for easy access and simple linkage control. Counterbalance valves on each track drive prevent the track motors from slipping while the cutter wheel is engaged in the cutting process, even while operating on a slope.

CONTROLS
The cutter wheel operation and articulating arm are operated by controls mounted on the console. The cutter wheel is activated by a switch on the control stick and has a secondary safety switch to prevent accidental engagement. Back and forth movement across the stump, as well as depth of cut, are easily controlled by handles on the console, allowing for carefully controlled movement of the cutter wheel as it reduces the stump to chips.

ROI
All hydraulic drive to the cutter wheel eliminates costly belts. It also increases customer satisfaction by ensuring there is no loss of power because of a damaged belt or mechanical component. The track drive increases maneuverability around the jobsite, creating customer satisfaction by allowing them to get the job done with increased efficiency.

FEATURES
Easy controls operate the track drive and cutter wheel
Time-tested track design absorbs impact and provides stability
Hydraulically driven, center-mounted cutter wheel provides 134° head swing.
The engine is coupled to two gear pumps: a larger pump drives the cutter wheel and a smaller pump works the tilt and swing
Counterbalance valves on each track drive prevent the track motors from slipping

**920LS/922LS LOG SPLITTER**

**DESIGN**

Built specifically for the demands of the rental market, the Barreto log splitter is the industrial standard. With a 790 lb. frame, a high carbon wear-alloy wedge, and a 6” x 25 lb. wide flange beam, this splitter is built to endure. The knife plate features high wear nylon pads. Torsion axle suspension reduces bounce and improves tracking and towability when transporting. The cushion mounted log cradle is designed to snap out of the way when using the splitter in the vertical position. A rubber bump stop protects the splitter when transitioning from vertical to horizontal and spring loaded lock bars secure the splitter in place. The engine is mounted on rubber isolators to protect from vibration when towing or operating.

**CONTROLS**

Safety is standard with a mandatory two-handed control system, cushion mounted log cradle, and spring loaded cleaning wedge. An innovative, adjustable torsion axle can be moved to one of three positions to reduce or increase tongue weight to the owner’s preference. Fenders and tail lights are available to meet individual state trailer towing requirements.

**ROI**

To decrease maintenance, this splitter features a powdercoated finish, hydraulic intake screen, and protected oil filter. The industrial grade frame, reinforced foot, and rubber mounted components reduce many of the maintenance issues log splitters often present. The large hydraulic oil reservoir ensures the machine runs efficiently and keeps the cylinder and other hydraulic components from overheating. This splitter was designed for longevity and built to endure the abuse of the seasons.

**FEATURES**

- The rugged, heavy duty design will hold up to the challenges of the job
- Two handed control provides operational safety
- Spring loaded wedge cleaner
- Torsion axle suspension
- Cushion mounted log cradle is designed to snap out of the way when using the splitter in the vertical position

**CYLINDER OPTIONS**

20 ton (4”) or 22 ton (4 1/2”)

CHIPPER MULCHER SHREDDER

DESIGN
The Chipper Mulcher Shredder transforms yard debris into valuable mulch. The CMS is powered by a 31hp V-Twin Briggs Vanguard engine with electric start. The CMS is designed to chip logs and branches up to 4”, while the mulching hopper accommodates smaller leaves and branches. The CMS comes ready to tow with a standard torsion axle and quick release coupling.

ROI
Landscapers, gardeners, and weekend warriors alike will be looking for a CMS for every tree trimming job, as they will significantly reduce or eliminate the number of haul away loads required, saving them time and money. Gardeners will be excited to turn their yard trimmings into valuable gardening mulch. As a bonus, shredding their compost can give their composting efforts an extra boost. To reduce the cost of maintenance, the chipping blades are double sided and the mulching/shredding hammers have four hammering surfaces. Both have quick access ports for easy servicing or repair.

### Engine Options*
- Honda (HP: 8.5)
- GX270
- Fuel
- Gasoline

### Additional Specs:
- Hydraulic Reservoir: 7.8 gallons / 29.53 liters
- Ground Drive Forward: 78 ft/min / 23.77 m/min
- Ground Drive Reverse: 78 ft/min / 23.77 m/min
- Tine Speed: 290 rpm / 290 rpm

*GX270 specs per http://engines.honda.com/models/model-detail/gx270
DESIGN
All hydraulic means easy maintenance, no downtime, and the most efficient use of your horsepower to get the job done. Till effectively in small spaces by choosing either a 16 or 18” tilling width on these models. The open design provides easy access to the hydraulics when maintaining or repairing. The unique swivel handlebar featured on this compact unit means you can walk alongside your tiller rather than in your freshly tilled earth. The heavy design means your tiller works for you instead of tossing you around. Counter-rotating tines break up the most difficult soil, clay, or sod. Wheels and tines work independently of each other to allow your tilling travel speed to be adjusted to the soil conditions.

CONTROLS
The operator-friendly controls couldn’t be easier: one handle to set the tine drive and one to adjust the wheel drive. Engage the clutch lever, use the variable speed drive to adjust the ground speed, and engage the tines when you are ready to till. If you need to stop for a moment, drop the clutch and the tines and wheels will stop, leaving your engine running and ready to pick up where you left off.

ROI
With no belts, chains, or gears to mess with, maintenance is minimal. A simplified control valve at the handlebar further reduces moving parts. The hydraulic motor is recessed into the outside of the frame for easy accessibility and removal. Ball bearing support on each end of the tine shaft allows the motor to be removed for service by simply removing two bolts. A tiller that’s down produces no revenue: by choosing hydraulics, you’ll increase utilization and minimize maintenance costs, improving your bottom line.

FEATURES
Pivoting handlebar allows closer tilling along houses or fencelines
Hubs unlock to free-wheel the tiller when the engine isn’t running
Counter-rotating tines cut through sod and hard packed soil
All hydraulics are easily accessed for maintenance and repair
Simple controls are easy to learn and easy to operate

REAR TINE TILLER

DESIGN
All hydraulic means easy maintenance, no downtime, and the most efficient use of your horsepower to get the job done. Weight, balance, stability, and tine speed allow this tiller to work where others can’t. The open design allows for easy access to the hydraulics when maintaining or repairing. The heavy design means your tiller works for you instead of tossing you around. The tine drive motor is directly mounted to the tine shaft resulting in a system so durable the original tiller was rented out for more than 20 years. Counter-rotating tines break up the most difficult soil, clay, or sod. The wheel drive and tine drive work independently of each other to allow your tilling travel speed to be adjusted to the soil conditions.

CONTROLS
The operator-friendly controls couldn’t be easier: one handle to set the tine drive and one to adjust the wheel drive. Engage the clutch lever, use the variable speed drive to adjust the ground speed, and engage the tines when you are ready to till. If you need to stop for a moment, drop the clutch and the tines and wheels will stop, leaving your engine running and ready to pick up where you left off.

ROI
With no belts, chains, or gears to mess with, maintenance is minimal. The hydraulic motor is recessed into the outside of the frame for easy accessibility and removal. Moving parts are protected by seals and plates. Pressure relief valves prevent damage when tines are blocked, reducing the chance of costly repairs. A tiller that’s down produces no revenue: by choosing hydraulics, you’ll increase your utilization and minimize maintenance costs, improving your bottom line.

FEATURES
Marked grease zerks allow for easy maintenance
Hubs unlock to free-wheel the tiller when the engine isn’t running
Hard faced, counter-rotating tines cut through sod and hard packed soil
Hydraulics are easily accessed for maintenance and repair
Simple controls are easy to learn and easy to operate

The 3X4TBT is the standard for any Barreto tiller. Easy to transport, easy to load, and ready to rent. Featuring an all-steel frame and a quick connect bracket for the bumper of your tiller, hauling equipment has never been easier.

3X4DGT 712MT TRAILER

Dimensions:
- Empty Weight: U.S. 285 lbs, Metric 130 kg
- Gross Weight: U.S. 700 lbs, Metric 318 kg
- Length: U.S. 9’ 3”, Metric 2.82 m
- Width: U.S. 4’ 9”, Metric 1.45 m
- Bed Size: U.S. 3’ x 4’, Metric .91 x 1.22 m

Designed exclusively for our 712MT micro trencher, the 3X4DGT features drop down ramps for simple loading and unloading. A wheel bracket in the front secures the trencher to the trailer. The textured powdercoat finish helps to increase traction and durability.

4X6TBT UTILITY TRAILER

Dimensions:
- Empty Weight: U.S. 500 lbs, Metric 226.8 kg
- Gross Weight: U.S. 2,200 lbs, Metric 917.18 kg
- Length: U.S. 10’ 5/8”, Metric 3.06 m
- Width: U.S. 5’ 3/16”, Metric 1.53 m
- Bed Size: U.S. 4’ x 6’, Metric 1.22 x 1.83 m

Barreto offers a tilt-bed utility trailer to help you transport not only your Barreto equipment, but also any other equipment in your fleet. This trailer offers quick-change attachments that allow for easy loading. Available with the bracket of your choice (tiller, mini-trencher, standard trencher or track tie down), this trailer also features 6 tie-down rings to accommodate a variety of equipment.
CRUMBERS
Optional spring loaded crumber feeds extra backfill out of the trench for clean depth.

LIFT EYES
Lift eyes are available for loading equipment with a forklift or crane.

RIDE PLATFORM
The optional platform for the track trencher provides the operator with the ability to ride on the unit during transportation and operation.

BACKFILL BLADES
Make refilling trenches simple with the easily attached backfill blade. Available for all trencher models 13hp and larger.
